

# TransLight Corp - TLC

This sheet illustrates the projected beam pattern of a 10Volt-25Watt lamp lit at 10.0 volts, with and without our Slide-on CLS Reflector. Note the lm (Lumen/meters) readings, without the reflector is 7.125 lm and with the reflector is 70.321 lm. An increase of about 10 times more projected beam pattern, focused at the circumference of the inter color lens for maximum utilization of the existing optic lens set.

## ISO Candela Plot of 10V25W Lamp with the CLS Reflector
